| Hysterectomy                               | 100%                  | Surgical procedure to remove the uterus                                       | • Eliminates problem bleeding  
• One-time procedure  
• Permanent                                                                   | • Cost, major invasive surgery  
• Risk associated w/ major surgery  
• Requires general anesthesia  
• 2-8 week recovery time  
• Non-reversible, lose fertility  
• May cause early onset of menopause1  
• Typically the last option for women not responsive to other treatments |                                                                              |
| Global Endometrial Ablation (Data represents the NovaSure procedure) |                       | Successful reduction in bleeding (1 yr) 98%2  
Reintervention rate (5 yrs) 2.8-8.2%23  
Amenorrhea rates range from 30-75%12 | • One-time, five minute procedure  
• Patient specific treatment  
• Average treatment is 90 seconds  
• Can be performed in-office  
• Immediate results, rapid recovery  
• Not menstrual cycle dependent  
• Minimally invasive  
• Must have completed childbearing  
• Non-reversible  
• Contraception required, due to danger of pregnancy post procedure  
• Risk of complications associated with minimally invasive surgery  
• May require anesthesia local/general                                                                 |                                                                              |
| Hormone Releasing Intrauterine Device (Data represents Mirena) |                       | Reduction to normal bleeding (1 yr): 67%4  
Hysterectomy rate after (5 yrs): 42%5  
Amenorrhea (1 yr): 20%5 | • Reduces/eliminates problem bleeding combined with contraceptive  
• Remains inserted for 5 years  
• Retain fertility (when IUD removed)  
• Mirena may take up to 6 months to provide relief from heavy bleeding6  
• Replaced every 5 years7  
• 30% experience hormonal side effects8  
• 70% experience intermenstrual bleeding8 |                                                                              |
| Tranexamic acid (Data represents Lysteda)   | 66% experienced a 1/3 reduction in menstrual blood loss7 | Anti-fibrinolytic, helps to normalize clot breakdown within the uterus | • Non-invasive  
• Self administered  
• Retain fertility throughout  
• Two tablets taken 3 times a day (high patient compliance required)9  
• Using Lysteda along with hormonal products may increase the chance of blood clots, stroke or heart attack9  
• Will not produce amenorrhea9  
• Risk for hormonal side effects  
• Results may vary depending on hormone3 |                                                                              |
| Hormone Therapy (Data based on Progestogens) |                       | Reduces problem bleeding in approximately 50% of patients4 | • Self administered  
• Contraceptive  
• Retain fertility once therapy is stopped  
• Not treatment given  
• No change likely till menopause  
• Average age of menopause is 51 years10 |                                                                              |
| No Management (Do nothing and monitor)      | No change until menopause | No treatment of any kind is given, patient is monitored and followed up with accordingly | • No treatment given | No treatment given | No change likely till menopause  
Average age of menopause is 51 years10 |

Treatment Options for Abnormal Uterine Bleeding (AUB)

Important Safety Information
NovaSure endometrial ablation is for premenopausal women with heavy periods due to benign causes who are finished childbearing. Pregnancy following the NovaSure procedure can be dangerous. The NovaSure procedure is not for those who have or suspect uterine cancer; have an active genital, urinary or pelvic infection; or an IUD. NovaSure endometrial ablation is not a sterilization procedure. Rare but serious risks include, but are not limited to, thermal injury, perforation and infection. Temporary side effects may include cramping, nausea, vomiting, discharge and spotting. If you or someone you know, have possibly experienced a side effect when using our product, please contact your physician.
